PART I

SafePal The Company
What Is SafePal?

SafePal enables people to own and grow their assets.

Secure, Manage And Grow Crypto Assets At Your Fingertips

SafePal is a multi-blockchain cryptocurrency wallet that enables secure and simple crypto storage and management for the masses. The SafePal products consist of two parts: SafePal Hardware Wallet and SafePal Software Wallet, both connected to and managed by the SafePal App, the mobile management tool for users to manage, buy, swap and trade crypto, and login to Dapps in the most convenient way.
Dedicated To Serving Global Crypto Communities

- Completed integration with 19 blockchains and 10,000 tokens
- Released cross-chain swap, supporting frictionless swap between 10,000+ tokens from 19 blockchains

2020.08
- Embedded with Binance exchange
- Added Dapp entrance and supported all popular Dapps from Ethereum and Tron

2021.01
- SafePal issued its utility token---SFP.

2020.10
- Fully supported ERC721, ERC1155 and BSC NFT standards

2020.09
- Integrated with Binance Smart Chain and supported BEP20 tokens
Team Background

We are Diversified, Proactive and Persistent.

The Story Behind SafePal
SafePal was founded in Jan 2018. The SafePal Team comes from a diverse industrial background, overlapping more than a decades worth of experience in hardware, software, UI design and cyber security. As a team deeply rooted in both hardware and software, SafePal aims to resolve the current pain points hindering crypto custodian experience for the masses, and combine security, simplicity and accessibility on a unified product. That is how SafePal came into being.

Advantageous Supply Chain
Being based in Asia with close ties to Shenzhen (China’s hub for cryptocurrency), the team has a wealth of resources with leading tech giants like Tencent, Huawei, and Samsung. Shenzhen being the silicon valley of hardware and the global leader in electronic production, the ability of SafePal to source high quality components is unparalleled. With the huge competitive advantage in the industry, economy of scale, extremely fast concept to inception speed, SafePal is able to produce the highest quality product for a fraction of the cost compared to other competitors. With the support of our partners this value is given directly back to our customers which is why we offer the most valued priced crypto hardware wallet in the industry.
Endorsed By Industry Leaders

Ling Zhang
VP of Mergers & Acquisitions at Binance

“The security of user assets always remains top priority throughout our product and business activities. Lowering the hurdle for users to own and use a safe hardware wallet in an easy and user friendly way is one of the unique values we identified when we looked into SafePal products.”
### Robust Ecological Partnerships

SafePal The Wallet
SafePal S1
Hardware Wallet
Secure assets in your own bank
1. Secure Packaging And Unboxing

- **Anti-faking Stickers**
  The two one-time anti-faking stickers on the SafePal S1 giftbox can help customers to examine whether the box is new and opened for the first time.

- **Device Authentication**
  When the S1 is first powered on, users will need to go through a compulsory device authentication process to make sure the device is genuine. The authentication procedure cannot be skipped before the wallet configuration, which helps the customers to confirm that the wallet is activated for the first time. (More details can be found in our Knowledge Base)
2. Hardware Security

- **CCEAL5+ Secure Element**
  SafePal S1 adopts dual-chip architect, separating sensitive security logic from general business logic inside the product. Your private key is protected separately and safely in the financial grade EAL5+ secure element.

- **Air-gapped Signing Mechanism**
  Instead of USB, WiFi, NFC, antenna or any other radio-frequencies, SafePal S1 adopts air-gapped signing mechanism, keeping the device 100% offline. To transfer a fund from a SafePal S1 hardware wallet, the only way to sign and approve the transaction is to scan the short-distance QRcode, which can prevent any online attacks and short-distance peeking.

- **True Random Number Generator**
  SafePal S1 is embedded with a true random number generator to make sure the private key created in the device is unique and truly random. *(Click here to learn "Why does TRNG matter?")*

- **Self-destruct Mechanism**
  SafePal S1 is embedded with multiple security sensors. Once any malicious attempt is detected by the sensors, the sensor will trigger self-destruct mechanism and thus the secure element will erase all wallet data, leaving no trace for the hackers.
3. Firmware Security

- **PIN Code**
  The SafePal S1 PIN code is a 6-12 digit code for users to approve transactions on the S1 device. It is dis-ordered when the wallet owner is entering the PINcode.

- **Security Suffix**
  The security suffix on SafePal S1 hardware wallet is a combination of 3 characters (letters and numbers) that will appear on the wallet screen together with the wallet name. The security suffix is an ID to identify a unique hardware wallet and mnemonic phrase. Once any attacker tries to reset the wallet and import the hacker’s own wallet using the same wallet name, users might mistakenly receive crypto with the fake wallet account. The security suffix can effectively avoid such scenario from happening.

- **Passphrase**
  Passphrase is an advanced feature of the SafePal device which allows users to create hidden wallets. Passphrases serve as a function of second-factor protection of the mnemonic phrase and are ultimate protection against attacks involving physical access to the device or the mnemonic phrase.

- **Secure Upgrade Procedure**
  SafePal S1 is embedded with firmware verification program that examines the genuineness of every uploaded firmware. The device only runs official firmware released through SafePal official website. SafePal only supports firmware upgrade rather than downgrade, thus to protect any potential attacks from a lower version.
4. App Security

SafePal S1 hardware wallet needs to work with a SafePal App. The S1 wallet is mainly to keep the private key offline and secure, and sign every transaction, while the SafePal App can be used to view balance, create new transfer and manage assets in a convenient way. Therefore, the App security is also a very important part for the complete wallet security.

- **Security Password**
  On first opening the SafePal App, users will need to create a new security password with at least 8 alphanum (letters & numbers). It can help to prevent acquaintance attack, and prevent user from setting the same password for the App and the S1 hardware wallet.

- **Privacy Mode**
  Users can choose to show or hide the asset balance by switching the eye icon next to the balance. This feature is mainly to protect user privacy and prevent potential risks caused by the leakage of user’s assets information.
Friendly Product Design

1.3’ IPS screen, displays every detail of your assets

Intuitive D-pad, handy to use for everyone

Manage crypto at your fingertips, anytime, anywhere

Scan and send. It’s never been that easy!

Setup and play in 3 minutes, no PC or laptop needed

Slim and stylish design. Always secure and protected wherever you go

SafePal In The News

Binance-backed tokenized hardware wallet offers DeFi and NFT features

Binance has financially backed a tokenized hardware wallet for the first time — with the product offering a lightweight, simple and secure way to store digital assets.

SafePal: A low-cost, SE based, Air-gapped Hardware Wallet

While discussing hardware wallets, Trezor and Ledger are the two popular names that usually come to the mind. But there are, in fact, other players in this particular market that are slowly getting the spotlight.

In a previous article, we explored a secure Bitcoin

SafePal S1 Review: A Hardware Wallet Funded By Binance Lab

Confused between SafePal vs Ledger vs Trezor??? SafePal S1 is an interactive wallet equipped with a camera and HD Display screen. In SafePal S1 Review, we will discuss the design and features in detail. We will also compare SafePal Hardware Wallet with Ledger and Trezor in Short. Let's start with SafePal hardware Wallet review.

SafePal S1 - Le Hardware Wallet compatible Binance DEX

Un hardware wallet rédoutant qui allie l'utilisation de QR-Codes, une compatibilité avec Web3, un prix ridiculement bas et le tout supporté par Binance Labs !

🌟🌟🌟🌟🌟 I Luv the S1!
Reviewed in the united States on July 13, 2020
Verified Purchase

So far the S1 is perfect! I luv the size, how it feels in the hand, it's easy to use and the price is amazing. It's a perfect starter wallet for someone who's relatively new to crypto and wants that extra piece of mind. My one complaint is I wish the camera was on the opposite edge which would make it more natural but that's just me nitpicking. Oh and the team behind this is super responsive and seems very dedicated. I highly recommend this hardware wallet!
